Hello Nancy,

I just spoke to Trident, they don't have an exact location of the known population of Sensitive Joint Vetch on the Manumuskin but he said that it could be as much as 1000 feet downstream from the outfall of Cumberland Pond.

As I indicated earlier, there is no construction planned near the Cumberland Pond outfall. The pipeline is being installed using HDD in this area and the nearest surface construction is over 1000 feet away east and west adjacent to Route 49.

Hello Nancy,

I contacted Trident and they are searching for information on the location of the population of Joint-vetch. If they find anything I will let you know.

As we discussed, there is no construction planned near the Cumberland Pond outfall. The pipeline is being installed using HDD in this area and the nearest surface construction is over 1000 feet away east and west.

Steve:

we got a comment regarding "a particular area of wetlands along the Manumuskin River, downstream from the western origin of the pipeline. This is where Commissioner Ficcaglia talks about the Joint-vetch being located.

do you know where this spot is? and how close is it to construction activities?

tx
